

HTML & CSS

Lists in Html

Lists are block level elements.

There are various types of Lists in html

1) ul unordered list

syntax

```
<ul>
<li></li>
</ul>
```

for eg:

- home
- About

as you can see bullet by default to style them

```
<style>
ul{
    list-style-type:none;
}
</style>
```

this will remove your bullets

There are mutiple properties for changing style of list in css

```
<style>
ul{
    list-style-type: armenian;
    //list-style-type: georgian;
    //list-style-type: decimal;
}
</style>
```

2) ol ordered list

syntax

```
<ol>
<li></li>
</ol>
```

for eg:

1. home
2. About

It will give u 1 2 3 by order

If u dont want this u can change in css

```
<style>
ol{
    list-style-type:none;
    //list-style-type: armenian;
    //list-style-type: georgian;
    //list-style-type: decimal;
}
</style>
```

this will remove your 1 2 3

// dont use this just for writing purpose i use doble backslash

In ol list there are 2 attribbute

i)type="a" or "i" or "A" or "I" it will give you from a b c

syntax :

```
<ol type="a">
<li></li>
</ol>
```

eg:

- a. home
- b. about
- c. contact

ii)start="50" it start from number 50 51 52

syntax :

```
<ol start="50">
<li></li>
</ol>
```

eg:

- 50. home
- 51. about
- 52. contact

There is also nested list in Lists

Syntax:

```
<ol>
  <li>frontend</li>
    <ul>
      <li>frontend</li>
    <ul>
      <li>html</li>
      <li>css</li>
      <li>js</li>
    </ul>
  </ul>
</ol>
```

eg:

- 1. Frontend
 - html
 - css
 - js

3) dl description list

Syntax:

```
<dl>
  <dt></dt>
  <dd></dd>
</dl>
```

```
dl // description list
dt // description term
dd // describe data
```

eg:

lime soda
soda

In dl list nested dl dont work
